

API Rate Limits

Rate limits protect platform stability. Limits apply per API key.

Free plan: 100 requests per minute, burst up to 150.

Pro plan: 1,000 requests per minute, burst up to 1,500.

Enterprise plan: custom limits negotiated in your contract.

Monitor usage at Settings > API > Usage. Charts update every 5 minutes.

When you exceed your limit, the API returns HTTP 429 Too Many Requests. Wait 60 seconds or upgrade your plan.

Contact sales for temporary limit increases during product launches.
