

Webhooks and Integrations

Webhooks notify your server when events occur. Available on Pro and Enterprise plans.

Configure webhooks at Settings > Integrations > Webhooks. Supported events: job.completed, job.failed, user.invited, invoice.paid.

Each webhook includes an HMAC-SHA256 signature in the X-SmartDesk-Signature header. Verify signatures before processing.

Retry policy: failed deliveries retry at 1 min, 5 min, 30 min, 2 hours, then stop. View delivery logs in the dashboard.

Native integrations: Slack notifications, Zapier, and Segment. Enterprise customers can request custom integrations.
